

# Myridas Update 11.0.2 - Release notes

November 2011

## Myridas Update 11.0.2

**PLEASE NOTE THAT MYRIDAS 11.0.2 IS COMPATIBLE WITH MICROSOFT DYNAMICS GP 2010 R2 (SERVICE PACK 2)**

## Installing Myridas Update 11.0.2

To install Myridas 11.0.2, follow the instructions in the Myridas Download and Install documentation.

## Issues Resolved and New Features in Myridas 11.0.2

### Advanced Inventory Replenishment

Fix for the following:

1. If a forecast period is changed to have percentage growth, then the percentage did not appear in the Forecast Enquiry.
2. For an item included in PO Generator via the "Include Line Point" checkbox, the suggested order quantity was set to zero.

Functionality change:

1. Demand start date is now set to item creation date on new items.
2. The automatic update of PO Generator information for Forecasted Items included items which did not require update. This has been changed to make the routine more efficient.

### Distribution Enhancements

Feature extension:

1. Alternate Item Numbers can now be used in PO Entry.

### Distribution Extensions

New features:

1. Customer special prices for customer groups – see the Distribution Extensions User Guide for more details
2. Customer discounts – value and percentage – see the Distribution Extensions User Guide for more details.

### Duty Processing

Enhancement:

1. Dutyable units now allow 8 decimal places.

### Extended Pricing Enhancements

Fix for the following:

1. Aggregate Pricing - if a user creates an Item unit of measure record but leaves the U Of M as blank, the Pricing routine does not use the U of M from the Unit of Measure Schedule if one has been set up.

Enhancements:

1. New facility for Default item on Free Item lists in Aggregate Promotions
2. Option to default free items for Points Allocation type Aggregate Promotions

### Sales Analysis History

New feature:

1. New Sales Analysis Adjustment window.

### Sales Navigator

Fix for the following:

1. Error "A range start operation on table 'tcsSOPTB00086\_Sales\_Docs\_TMP'" is for an invalid key when the Sort By option was not set in Sales Search window.
2. In the Sales Search window, if the user specified a different Customer Address, then rapidly pressed the 'Create Sales Document' followed by 4 Tabs, address details were not created on the Sales Document.

### Unit of Measure management

Fix for the following:

1. Item Stock Enquiry - when displaying a Transfer in the same Location but between Statuses (e.g. On Hand to Damaged), when displaying the Transaction in Item Stock Enquiry for the specific Location, the Qty In was displayed as 0. When displaying for All Sites, the Qty In was correct.

### Vehicle Load Planning

New Features:

1. A new sql trigger has been added to create load planning details for documents imported from an external source e.g. EDI.
2. Additional Sort option, route/drop reverse sequence, in tcs10 Quick Route/Drop Maintenance
3. New Quick maintenance window grouping documents by Customer and Address
4. Consolidated Picking List production for all the documents on a load. See the Vehicle Load Planning User Guide for more details.

### Vendor Pricing

Fix for the following:

1. Vendor Prices in PO Generator did not take Quantity Breaks into account.
2. Incorrect case on references in vendor pricing stored procedure – caused problem with case sensitivity in Binary database.
3. The Add Line Point button in Purchase Order Generator did not work.

Functionality change:

1. If the user selects a vendor price in PO Entry which is not for the quantity break for the quantity on the order, a warning is displayed.

## **Update History - Issues Resolved and New Features in Myridas 11.0.1**

### New Modules

1. New Distribution Extensions module. See the Distribution Extensions User Guide for more information.

### General

Fix for the following:

1. When Printing Documents, if module 5 (Load Planning) is not active, an error is reported on an open operation on table tcsSOPTB00077\_Docs\_By\_RouteDrop.

### Additional Charges

Fix for the following:

1. Additional charge checks were performed for IST receipts. This check has been removed.

New features:

1. When creating a Return Based on Invoice which includes Additional charges, the user is now given the option to mark Additional Charges as complete.

## Advanced Inventory Replenishment

Fix for the following:

1. The Demand start date is not updated on the first invoice for items added automatically.
2. Item Resource Planning quantities are updated when using the AIR Setup Wizard, even if the option to update quantities is turned off.
3. In tcs91 Line Point Maintenance, if two different items have the same vendor item number, the lead time from the first one is always shown.

New feature:

1. New option to use the default item site when recording demand.
2. Additional user category filters have been added to the Demand Review window
3. The Lead Time Review window has a new option to set lead times globally for a vendor
4. Display Unit of measure has been added to Forecast Review, Line Point Enquiry, Demand Review, Forecast Enquiry
5. Available stock and safety stock have been added to the Residual Inventory Enquiry
6. There is a new option to include Assembly Orders in Demand

## Call Scheduling

Fix for the following:

1. Create a Call Schedule and put a Customer on twice with two different Addresses. In the Call Processing window, highlight the first address and click the phone icon. Manually open SOP\_Entry and create an Order for the second address. (1) The software does not warn you that the Address is on a Main Schedule. (2) If you continue and save the Order, the Call Action window displays the wrong Address.

## Catalogue Based Sales

Fix for the following:

1. Keystrokes are sometimes lost during fast order entry from the catalogue.

## Catchweights

Fix for the following:

1. Adding a lot item in a stock count that is a catchweight item and the items lots have a bin the resulting variance written does not have a catchweight tracking record with it. This results in an adjustment for the weight but a zero net change in the catchweight quantity.
2. The module check on the window tcs20 Assign Item CPV is incorrect.

## Distribution Enhancements

New Feature:

1. New Backorder Allocation window. See the Distribution Enhancements User Guide for further information.

## Extended Pricing Enhancements

Fix for the following:

1. An error occurs under the following circumstances: two Customer Groups are created containing the same Customer. Both Groups are assigned to the same Promotion. When creating a Sales Document for the Customer, when you open the Aggregate Promotion Tracker, you get a duplicate key error.
2. Aggregate Promotions - for 'Every Item In List' and 'Variable Quantity List' Promotions, on the Free Item list, the Quantity Free value is not taken into account.

## Extended Pricing Integration

Fix for the following:

1. In Extended Pricing Export, the Description is exported to column "Z" even if not included in the Spreadsheet template.

2. Extended Pricing Import fails to import all quantity break records for certain Unit of Measure Schedules with decimal places.

### Inter-Site Transfers

Fix for the following:

1. In POP Receiving, when receiving a lot product on an IST, receive an error “You can’t edit this item’s cost because the option to allow editing costs in receiving has not been selected”. This occurs if the “Allow Editing of Costs in Receiving” is disabled.
2. When creating an In-Transit Receipt, if there are two or more different Invoices that were Posted on different dates, you can only select the last record in the scrolling window.
3. When using the IST receipt validation option for Receipts created from external systems, the cost is not updated correctly.

### Returns management

Fix for the following:

1. In a multi-bin environment, returns based on invoice are being returned to the bin from which the invoice was picked. This has been changed to use the appropriate default bin.
2. When multiple users are entering a Return Based on Invoice for a value type return, it is possible for one user to add another user’s document lines to their document.

### Sales Analysis History.

1. New indexes added to Sales Analysis History table.

### Sales Navigator

Fix for the following:

1. In the Sales Document Address Search window, the related document scrolling window shows documents from either Work or History. It now shows both.
2. Quotes missing from the drop-down list if Advanced Distribution is not in use.

### Vehicle Load Planning

Enhancement:

1. Facility to change the number of parcels has been added to the Quick Route/Drop maintenance window.
