Upgrading Myridas Installations to Great Plains 8.0

To upgrade your Myridas installation you will need Myridas 8.0 software and installation instructions. These can be downloaded from the Trinity Partner website. The installation executable (setup.exe) can be downloaded from the Myridas 8.0 "Server and Client Install" link in the "Software Modules and Patches" Download area of the Trinity Partner website. The installation instructions can be downloaded from the "Download & Install Instructions" link in the same area.

Server Upgrade

To upgrade your Myridas installation please follow the following instructions:

- (1) Ensure that you have new registration keys for Myridas 8.0.
- (2) You must complete your upgrade to Great Plains 8.0 service pack 1 before upgrading your Myridas installation.
- (3) Backup your Dynamics and Company databases.
- (4) Remove the existing Myridas Module Installer from your system using Add/Remove programs from the Windows Control Panel. Once the uninstall has completed, ensure that the installation directory (default C:\Program Files\Myridas setup) and its contents have been deleted.
- (5) Rename your existing Myridas dictionary (Myridas.dic). We do not recommend loading a Myridas 8.0 chunk file over an existing Myridas 7.8 dictionary.
- (6) Install Myridas 8.0 following the instructions in the Myridas Download and Install 8.0 manual until you reach "Registration Keys Screen". Enter your Myridas 8.0 registration keys. Press next to reach "Upgrade Screen". The Myridas module installer will recognise that a new version is available as described in the "Upgrade Screen" section of the Download and Install 8.0 manual. Click the Install button when prompted to do so to update your existing installation to the new version. This may take several minutes.
- (7) In the Installation Options window for Myridas 8.0, select each company in turn, choose the option to Enable Alternate Forms, and click the Install button.
- (8) Close the Myridas Modules Installation window

Client Upgrade

On each client rename your existing Myridas dictionary (Myridas.dic), then follow the instructions in the Client Installations section of the Myridas Download and Install 8.0 manual. We do not recommend loading a Myridas 8.0 chunk file over an existing Myridas 7.8 dictionary.

Additional Notes

Please note the following:

- (1) Advanced Distribution, Advanced Picking and Available to Promise are no longer contained within the Myridas dictionary.
- (2) The Bulk Picking by Load feature which was previously a part of Advanced Picking has been redesigned as an integration between Myridas Load Planning and Great Plains Advanced Picking - Bulk Picking by Batch. When printing a Bulk Picking List for a load, all the documents from the load will be transferred into a batch, which is then be printed using the standard bulk picking functionality.
- (3) Catchweight information is no longer printed as standard on picking tickets, but can be added using the Report Writer function documented in the Catchweight manual.
- (4) There are several new alternate windows in Myridas 8.0. See the table in the next section for the alternate window and report changes between Myridas 7.8 and 8.0.

Myridas alternate windows and reports

Window Name	Used by these modules in Myridas 7.8	Used by these modules in Myridas 8.0
